

PROJECT PITCH:

Hagsaeng Deitoe

Korean Language and Training Center Web Admin and Student's Portal

ABOUT THE PROJECT

The Project's main goal is to make an online records for the admin and a gateway where students can log into a school website to access important records easily.

WHAT ARE WE WORKING ON

SECURE

Student's records are secure and can not be tampered

ACCESSIBLE

Easily Accessible by the admin at any branch, and student's can view their record through their portal

FAST AND RELIABLE

Fast cause all the records are stored properly in a system and reliable cause only the admin can edit and save all the students records

KEY FEATURES:

1. **Login/Logout Services**- This feature enabled authorized users to enter their username and password to access the system. This will secure the student data from alteration and possible lost.
2. **Student's Profile** – can be view and controlled by the students but only can be edited by the admin so that the admin will always be updated for future changes.
- 3.

APPROACH TO SOLVE THE PROBLEM

1. Paperless processes

Educational institutions are burdened by cumbersome paperwork and manual processes, and they find it difficult to maintain records on student's passports, E-registration records, date of training, Batch, Trainer etc., and track the information they need. Using School Management System, automate academic processes to save time and reduce staff workload.

2. Student Record Monitoring

Trainers are struggling to monitor student's records including the student's batch, Date of Training, If student's took the KLT Exam, Who's their Trainer and the branch where they trained, etc. .

3. Student's Records Accessibility

Admin and staffs are struggling during exam registration because student's records including the student's passport, poea e-reg, and all requirements needed to register for the exam are only stored at the computer of the branch where the student is enrolled especially if the training center have many branches , The admin and staff struggles to search for the records in the computer or the paper files in the office if they are time pressured because it is too many and not labelled properly, this system will store all the records in one database and the admin can access all the records of the other branch anytime, anywhere easily and it is reliable.
